

Materials:

Template, Stapler and/or paper clips, colored pencils or crayons.

Procedure:

1. Decorate the above spinner with colored pencils or crayons.
2. Cut out and fold the spinner.
3. Put a staple or paper clip on the bottom of the spinner.
4. Hold the spinner between your fingers and let fall to the ground.
5. The shape of the spinner makes air move unevenly around the blades, creating a force that spins it. The weight of the paper clip or staple makes it more stable, so it falls vertically and spins faster.
6. Experiment with different-sized spinners and weights.
